

I have over 40 years of HF/VHF/UHF radio experience, in Single side Band, Narrow Band and Broadband telecommunications, radar and avionic systems. The interference, bleed-over and the resulting noise-to-signal will make it impossible to communicate in any of these frequency spectrums due to the radiation effects created over existing power line grids.

Don't let these special interest groups influence you otherwise. I for one, expect the FCC to listen to its engineers and protect our telecommunication, radio and television systems by rejecting this proposal.
